PORTFOLIO

Resty Alfadila Romadhoni, S.Kom.

ABOUT ME

Resty Alfadila Romadhoni, S.Kom.

Bachelor's Degree Graduate in Information Systems from Institut Teknologi Mojosari with a strong interest in Data Analytics and Data Management. Experienced in data processing, data entry, and data validation through internship and academic projects. Familiar with Microsoft Excel, SQL, Python, and Looker Studio for data processing, analysis, and dashboard visualization. Possess analytical thinking, attention to detail, adaptability, and a willingness to continuously learn and develop skills in data analytics.

EDUCATION

Institut Teknologi Mojosari
Bachelor of Information Systems | GPA: 3.80 / 4.00
2022 – 2026

Undergraduate Thesis Project:
Developed an educational game recommendation system for children based on sentiment analysis using Logistic Regression. Processed and analyzed Google Play Store reviews using Python, TF-IDF, and Logistic Regression, achieving 94.83% accuracy through 10-fold Stratified Cross-Validation.

HARD SKILL

Data Preprocessing | Exploratory Data Analysis (EDA) | Statistical Analysis | Data Visualization | Dashboard Development

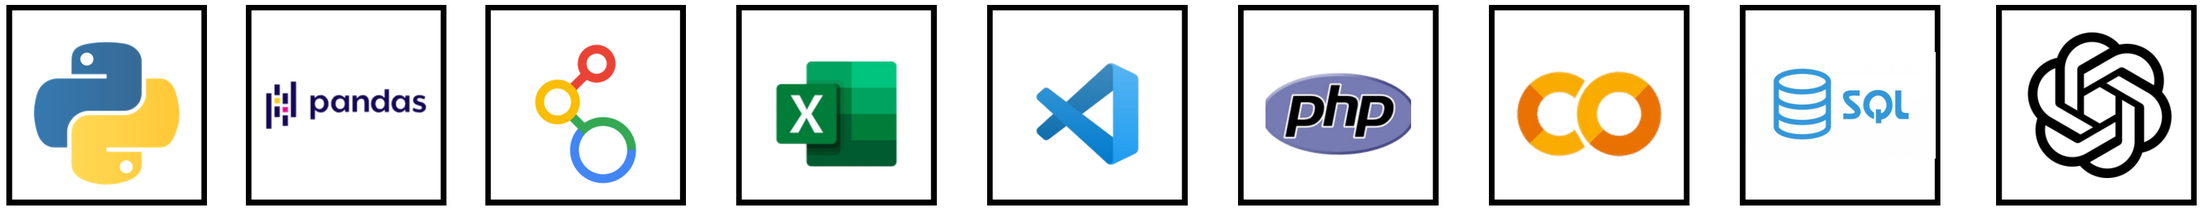

Supervised Learning | Natural Language Processing (NLP) | Sentiment Analysis | Text Classification | Logistic Regression

Machine Learning | Web Development | Database Management

SOFT SKILL

Analytical Thinking | Problem Solving | Attention to Detail | Teamwork & Collaboration | Adaptability

TOOLS

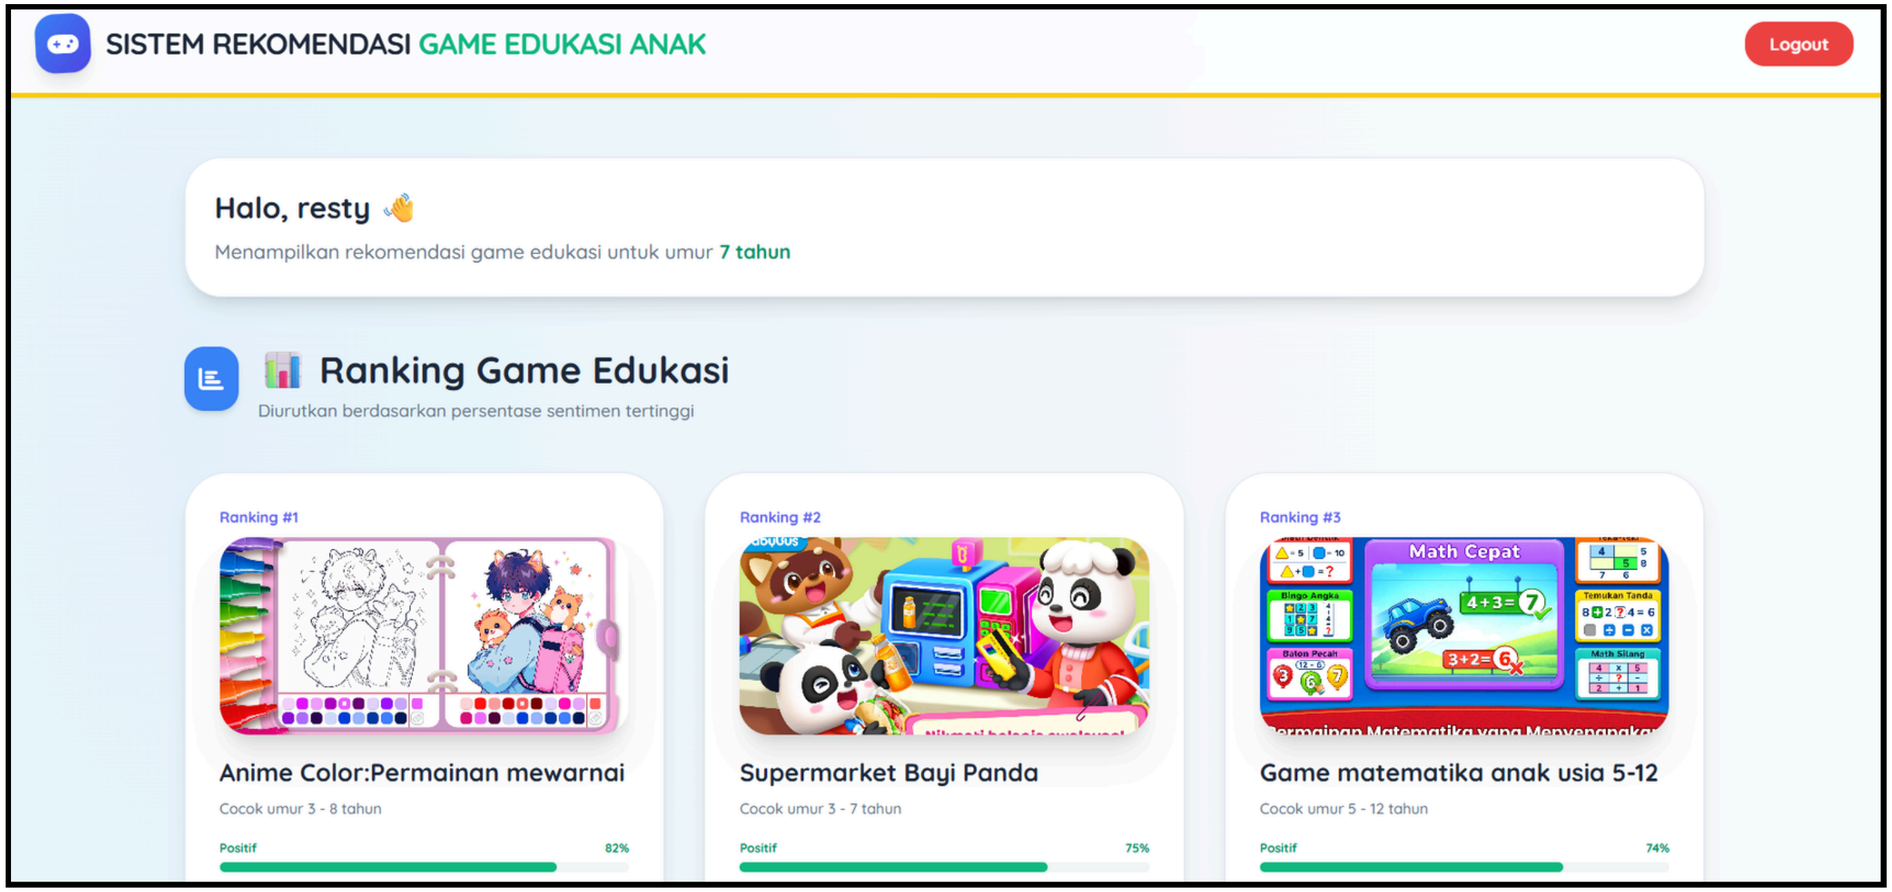

PROJECT EXPERIENCE

EDUGAME PINTAR: EDUCATIONAL GAME RECOMMENDATION SYSTEM BASED ON SENTIMENT ANALYSIS

Data Preprocessing | Machine Learning | Supervised Learning | Natural Language Processing (NLP) | Logistic Regression

Python | Google Colab | Scikit-learn | MySQL

Personal Project

Description

A web-based educational game recommendation system designed to help parents find suitable educational games for children aged 2–12 years. The project involves automated data scraping from Google Play Store, text preprocessing, sentiment analysis, and machine learning classification using Logistic Regression to evaluate user reviews.

Key Insight

- Collected 52,831 user reviews from 25 educational game applications using Google Play Scraper.
- Processed review data using text preprocessing and TF-IDF feature extraction.
- Classified reviews into positive, neutral, and negative sentiments using Logistic Regression.
- Achieved 94.83% accuracy through Stratified 10-Fold Cross-Validation.

Outcome

Successfully developed EduGame Pintar, a web-based recommendation system that utilizes sentiment analysis to help parents identify educational games based on user reviews.

HR ATTRITION ANALYSIS : EMPLOYEE TURNOVER DASHBOARD

Data Cleaning | Data Preprocessing | HR Analytics | Natural Language Processing (NLP) | Data Visualization

Microsoft Excel | Google Colab | Looker Studio | Python

Personal Project

Description

An HR analytics project focused on analyzing employee attrition to understand workforce turnover patterns and identify factors that may influence employees' decisions to leave a company. The project involves data cleaning, data preprocessing, exploratory data analysis (EDA), and dashboard development using an HR dataset from Kaggle.

Key Insight

- Analyzed employee data to identify overall attrition patterns and trends.
- Examined attrition based on department, job role, age group, gender, and education.
- Evaluated key HR metrics, including total employees, attrition count, attrition rate, and average employee age.
- Developed interactive visualizations to help explore employee attrition across different categories.

Outcome

Successfully developed an interactive HR Attrition Analysis Dashboard to present employee turnover patterns and provide insights that can support HR teams in understanding workforce attrition.

TRANSJAKARTA PASSENGER ANALYTICS: PASSENGER TRANSACTION ANALYSIS AND PUBLIC TRANSPORTATION USAGE DASHBOARD

Data Cleaning | Data Preprocessing | Trend Analysis | Natural Language Processing (NLP) | Data Visualization

Microsoft Excel | Google Colab | Looker Studio | Python

Personal Project

Description

A data analytics project focused on analyzing TransJakarta passenger transaction data to understand public transportation usage patterns. The project involves data cleaning, handling missing values, data preprocessing, exploratory data analysis (EDA), and interactive dashboard development to explore passenger activity based on travel routes, time periods, and passenger characteristics.

Key Insight

- Analyzed passenger transaction data to identify overall public transportation usage patterns.
- Examined passenger distribution based on corridors, travel routes, and passenger demographics.
- Explored passenger activity through tap-in and tap-out times to identify travel patterns.
- Created visualizations to compare passenger activity and transaction trends across different categories.

Outcome

Successfully developed an interactive TransJakarta Passenger Analytics Dashboard using Looker Studio to present passenger transaction patterns and provide insights into public transportation usage.

E-COMMERCE SALES ANALYTICS: MULTI-MARKETPLACE SALES PERFORMANCE AND CUSTOMER BEHAVIOR DASHBOARD

Data Cleaning | Data Preprocessing | Sales Performance Analysis | Natural Language Processing (NLP) | Data Visualization

Microsoft Excel | Google Colab | Looker Studio | Python

Personal Project

Description

A data analytics project focused on analyzing e-commerce transaction data from multiple marketplaces to evaluate sales performance, understand customer purchasing behavior, and identify business trends. The project involves data cleaning, data preprocessing, exploratory data analysis (EDA), and interactive dashboard development to compare marketplace performance and explore sales patterns across product categories, regions, and payment methods.

Key Insight

- Compared total sales, number of orders, and products sold across multiple marketplaces.
- Analyzed sales trends based on order dates and product categories.
- Examined customer distribution and purchasing patterns across provinces and cities.
- Evaluated order status, payment methods, discounts, and shipping costs to understand transaction patterns.

Outcome

Successfully developed an interactive E-Commerce Sales Analytics Dashboard to compare marketplace performance, monitor sales metrics, and provide insights into customer purchasing behavior and e-commerce transaction trends.
